Integrative Programming and Technologies 2
Laboratory #2

User Management and Role Implementation

Objective
Implement a **User Management Module** in your existing project based on the **user roles identified in your previously submitted Project Proposal**.

Instructions
1. Use the **same system and user roles specified in your submitted Project Proposal**.
2. Add a **role column/field** to your existing users table in the database.
3. The role field must store the user role assigned to each user based on the roles defined in your Project Proposal.
4. Create a **User Management Module** that allows an authorized user to manage system users.
5. Implement **CRUD functionality** for user management:
    - **Create** – Add a new user and assign an appropriate role.
    - **Read** – Display all registered users and their assigned roles.
    - **Update** – Edit/update user information and role.
    - **Delete** – Delete a user from the system.
6. The implementation should use your existing project database and technologies.
7. Do not create new or unrelated user roles. Use only the roles identified in your submitted Project Proposal.

Expected Output
Your system must demonstrate the following:
- A database **role** field/column in the users table.
- A **User Management Module**.
- A page/table displaying **all users** and their roles.
- Functionality to **add/create** a user.
- Functionality to **edit/update** a user.
- Functionality to **delete** a user.
- The ability to assign and update the user's **role**.

IMPORTANT NOTE:
Please **print the second page on short/letter-size paper** and **bring the printed copy during the checking of your output**. The second page will be used as part of the activity verification.

Connection to IAS1
The user roles implemented in this activity will be used in the **Information Assurance and Security 1** activity for implementing **role-based access control (RBAC)** and role-specific dashboards.

Integrative Programming and Technologies 2
Activity: User Management and Role Implementation
Name: _____
Year & Course/Section: _____
Date: _____

Scoring Rubric

Criteria	Description	Points	
Database Role Field	Added a role column/field to the users table and correctly stores the roles specified in the project proposal.	15	
User Management Module	Functional user management interface/module is implemented and integrated into the existing system.	15	
Create User	Can successfully add/create a user and assign an appropriate role.	15	
Display Users	Correctly displays all registered users and their assigned roles.	15	
Update User	Can successfully edit/update user information and role.	15	
Delete User	Can successfully delete a user from the system.	10	
Project Proposal Consistency	Uses the actual user roles identified in the submitted project proposal.	5	
Functionality & Integration	Features work properly and are integrated with the existing project/database without major errors.	5	
Total		**100**	

Expected Demonstration
The student should be able to demonstrate:
Database → role field → User Management → Create → Read → Update → Delete

User Roles from Your Project Proposal
Project Title: _____

No.	User Role from Project Proposal	Description / Responsibility
1	_____	_____
2	_____	_____
3	_____	_____
4	_____	_____
5	_____	_____

Reminder: Use only the user roles identified in your submitted Project Proposal. These roles will be used in the succeeding activities for **User Management, Role-Based Dashboards, and Access Control**.
